

Amendments to the Specification:

Please insert the following heading and paragraph after the title of the application on page 1 of the specification:

--Cross Reference to Related Application

This application is the National Phase application of International Application No. PCT/AU2005/000033, filed January 13, 2005, which designates the United States and was published in English. This application, in its entirety, is incorporated herein by reference.--

Please amend at page 36, in the paragraph beginning at line 8, the paragraph as follows:

- the ϵ value represents the dielectric constant, which is also related to the piezoelectric effect ~~{Cameron to advise if this is correct};~~

Please amend at page 36, in the paragraph beginning at line 18, the paragraph as follows:

From these results, it can be seen that the material $\text{KMn} [\text{Ag}^1 (\text{CN})_2]_3$ has a coupling coefficient which is better than that of quartz (quartz has a $K_{11} = 0.102$). This demonstrates that $\text{KMn} [\text{Ag}^1 (\text{CN})_2]_3$ displays a better piezoelectric effect than the standard oscillator crystal quartz. In addition, the mechanical properties and oscillator performance of $\text{KMn} [\text{Ag}^1 (\text{CN})_2]_3$ are comparable to that of quartz, indicating that $\text{KMn} [\text{Ag}^1 (\text{CN})_2]_3$ can be used in place of quartz in a crystal oscillator. ~~{Cameron to provide any further comments on what the results demonstrate};~~

Please amend at page 37, in the paragraph beginning at line 20 and continuing over to page 38, the paragraph as follows:

In other words, these further tests demonstrated that the piezoelectric effect for $\text{KMn} [\text{Ag}^1 (\text{CN})_2]_3$ is substantially improved over that of quartz, and yet the temperature stability of $\text{KMn} [\text{Ag}^1 (\text{CN})_2]_3$ is also vastly improved to that of quartz (ie. to the extent that no temperature compensation is required in an oscillator manufactured using $\text{KMn} [\text{Ag}^1 (\text{CN})_2]_3$ ~~{Cameron to add in any other further comments that are relevant in this section}.~~
